Tyson Mandela

AI systems architect — agents, automation, evidence

Bath, United Kingdom
hello@twinthos.com · twinthos.com

I build AI agents that take a defined, repeating job off a team and keep it running inside the tools that team already uses. **Specified before it is coded:** what the agent receives, what it decides alone, what it escalates, what proof it leaves.

EXPERIENCE

Founder and principal consultant

TWINTHOS · BATH, UK · 2024 — PRESENT

Solo operator. No employees, no outside funding. I built the company end to end — product, site, offer and pipeline. Offer: £3,500/month managed, £999 audit.

- Wrote the delivery contract: inputs, decision rights, escalation, evidence. That specification is the product.
- Built the platform: a 24-route site, 289 commits in 18 days, a 208-file knowledge layer that restores at session start, and an agent console.
- Built the tooling: a 526-line PDF pipeline with a nine-check gate, a 32-page × 24-check auditor and a source verifier. Backup proven byte-identical.

INDEPENDENT BUILDS

A Flask URL-to-PDF auditor · a WHOOP OAuth dashboard · a FastAPI agent console · 21 public repositories · 15 live sites deployed.

CONTINUED

Twelve years of my own business

Founder, owner and content lead

HUMAN ARCHITECT · ALKALINE ARCHITECT · 12 YEARS, EXITED

- Grew an audience from zero: 71 videos, 359,926 views, no paid acquisition.
- Built the health protocols, digital products and systems that sold to that audience — teaching the why before the what.
- Published six books under a pen name while automating the daily workflow end to end.
- Sold the brand and the social handle to Jason van Blerk of The Human Garage.

Founder

HUMANITAI CIC · COMPANIES HOUSE 16891121 · CURRENT

- A key-free Python scraper over four UK funders publishing 29 verified opportunities weekly.

02 — WHAT I BUILD

Four systems, built and run

Agent design

Job specification, decision rights, escalation path, audit trail.

Automation

Python, APIs, scrapers, schedulers, publishing pipelines.

Verification-first research

Every claim carries the page it came from. Every named person re-checked against their own page before shipping.

Document systems

PDF pipelines that hold a house style at volume, gated against contrast and overflow.

03 — METHODS I NAMED

Loop engineering — write the pass test first, re-run the same script, diff the results as proof. **The one page** — one job, one price, a link for every doubtable claim. **Five-factor scoring** — weighted, capped, drop reasons written down.

04 — EVIDENCE

What I can show you

A 32-page site audit at 24 checks a page that drove local findings to zero and named the eight only DNS could fix.

An 83-page book with 314 clickable source links and a section on what would make me wrong.

A security pass that found a server bound to 0.0.0.0 exposing .git and 25 secret matches in backup history — then fixed the redaction gap.

A 245-advert jobs sweep that excluded 55 training-course ads and reported the exclusion.
