20M VIEWS A MONTH · **2,000** STUDENTS · **500,000** FOLLOWERS · **6** BOOKS

PROFILE

Founder and operator. I built a health content business to around 20 million views a month, a paid community of two thousand students and six books, then sold the brand and its Instagram account. Since 2024 I have run Twinthos, which puts AI agents into defined jobs inside the tools a business already owns, with a person signing off anything that cannot be undone.

EXPERIENCE

Founder Twinthos

2024–PRESENT

WHAT	A managed AI-employee business: agents with a written job specification, a human approval step and verified output, running inside the client's existing tools.
ROLE	Solo and bootstrapped: product, pricing, marketing and delivery.
HOW	Writes the job specification for each agent, then the checks that decide whether its work is good enough to leave the building.
BUILT	The website, the document pipeline, the pre-launch checks and the prospect research the business runs on.

Founder HumanitAI CIC

2025–PRESENT

WHAT	A community interest company teaching AI safety and digital inclusion in the UK, in plain English.
HOW	Designs the curriculum and delivers the workshops: what the tools do, where they fail, what the law expects of you.
DETAIL	Registered community interest company, Companies House 16891121.

Creator & author Independent

2013–2025

WHAT	Daily on-camera video and short-form content on health, nutrition, addiction and brain science, with the writing and animation that supported it.
AUDIENCE	Around 20 million views a month at peak, with no paid advertising.
COMMUNITY	Built a paid membership to two thousand students and designed every course, module and student journey.
CLIENTS	Oxygen therapy and performance work with Novak Djokovic, Anthony Joshua and John Travolta, among others.
BOOKS	Author of *Alkaline Awakening* and six further books under a pen name, on nutrition, addiction, brain rewiring and disease prevention.
EXIT	Grew an Instagram account to 500,000 followers and sold it to Jason van Blerk of The Human Garage.

SELECTED WORK

Twinthos — product, price and launch

2024–2026

BRIEF — Launch a managed AI-employee business with no team, no funding and no audience in the category.

DID — Researched the market, set the positioning and the price, wrote the site, built the document and deployment pipeline, and built the prospect list behind the outreach.

NOW — Live, priced and launched as a one-person company, with every page checked automatically before it deploys.

AI adoption training — programme design

2026

BRIEF — Teams buy Copilot licences and change nothing. Training has to survive a billable-hour culture.

APPROACH — Micro-sessions built around one real task per role, a prompt library the team keeps, and a single page of rules staff will actually read.

MEASURED BY — Tasks completed with the tool, not attendance. One session per team, repeated per role.

CAPABILITIES

AI systems
Agent design · job specifications · prompt engineering · human review · output verification

Content
On-camera delivery · short-form video · hooks and retention · editorial planning

Build
Python-literate · static sites · GitHub Pages · print and PDF production

Training
Copilot and AI literacy · workshop design · safe-use policy · plain-English explanation

Growth
Community building · course design · offers · email and funnel copy

Strategy
Planning · implementation · communication · pricing · market research

HOW I WORK

Find the bottleneck before proposing a tool: if the process is broken, software makes it broken faster. Ship in weeks, not quarters. Put a number on every piece of work, and keep a human decision on anything that cannot be undone.

TRAINING & SPEAKING

AI adoption trainer: Microsoft Copilot, prompt engineering, AI safety and compliance. Workshops for professional-services teams in Bristol and online, from half a day to six weeks.
