Tyson Mandela

AI systems architect — agent design, automation, verification

Bath, United Kingdom · hello@twinthos.com · twinthos.com · github.com/alkalinearchitect

PROFESSIONAL SUMMARY

Systems architect and solo founder with twelve years of building and running my own digital businesses. I specify, build and operate AI agents that take a defined, repeating job off a team and keep it running inside the tools that team already uses. I write the job specification, the decision rights, the escalation path and the audit trail before any code exists, then prove the result with automated checks rather than assurances.

CORE SKILLS

Agent and LLM work: agent design, job specification, decision rights and escalation design, audit trails, prompt and tool orchestration, human-in-the-loop approval design.

Engineering: Python, Flask, FastAPI, REST APIs, OAuth, webhooks, JSON and CSV data pipelines, key-free web scraping, cron scheduling, Git, Linux, static site deployment and CDN operation.

Quality and verification: test-first development, machine-checked release gates, automated site auditing, source verification and citation checking, accessibility and contrast testing, security review of exposed services and secrets.

Documents and publishing: HTML and CSS to PDF pipelines, typographic and layout QA, house style at volume, long-form writing, editorial standards, multi-format output for print, ATS and mobile.

Research and analysis: market and competitor research from primary sources, company and decision-maker verification, weighted scoring models, pricing analysis against external comparables.

Commercial: product definition, offer and pricing design, positioning and copy, direct outreach planning, solo operation and cost control.

EXPERIENCE

Founder and Principal Consultant — Twinthos

Bath, United Kingdom · 2024 – present · solo operator, no employees, no outside funding

- Built the company end to end: the product specification, the live site, the commercial offer and the delivery pipeline.
- Specified the delivery contract for every engagement — inputs, decision rights, escalation, evidence — and made that specification the product rather than the software.
- Built the platform: a 24-route site, 289 commits in 18 days, a 208-file knowledge layer that restores at session start, and an agent console.
- Built the tooling: a 526-line HTML-to-PDF pipeline with a nine-check release gate, a 32-page × 24-check site auditor, and a source verifier that re-fetches every cited page.
- Proved disaster recovery rather than asserting it: deleted a knowledge file and restored it byte-identical from an hourly private mirror.
- Published the commercial offer at £3,500 per month for a managed digital employee and £999 for a one-off operations audit.

Founder, Owner and Content Lead — Human Architect / Alkaline Architect

2013 – 2025 · health and nutrition publishing · twelve years, exited

- Built an audience from zero to 359,926 video views across 71 videos with no paid acquisition.
- Built the health protocols, digital products and systems that sold to that audience, teaching the reasoning before the product.
- Published six books under a pen name — Alkaline Awakening, Intelligent Design, Life Force Energy, Body OS, Parasite Conspiracy and the Quit PRN Manual — while automating the daily workflow end to end.
- Sold the brand and the social handle to Jason van Blerk of The Human Garage.

Founder — Humanitai CIC

Companies House 16891121 · current · community interest company

- Built a key-free Python scraper across four UK funding bodies that publishes 29 verified opportunities each week.

SELECTED PROJECTS AND EVIDENCE

- **Site auditor and fix pass** — 32 pages at 24 checks each; drove local findings to zero and separated eight genuine hosting limits from repository defects.
- **Document pipeline** — 526-line builder plus a 353-line gate covering geometry, margins, clipping, page fill, type sizes, text-layer integrity, links, metadata and contrast.
- **Research register** — a UK company register with a named decision-maker per firm, every person re-checked against their own page before publication.
- **Long-form book** — 83 pages, 314 clickable source links, and a section stating what would prove the thesis wrong.
- **Security review** — found a web server bound to all interfaces exposing a repository and its history, plus 25 secret matches in backup history; closed the exposure and fixed the redaction gap.
- **Job market sweep** — 245 unique adverts parsed, 55 training-course adverts identified and excluded, exclusion reported rather than hidden.

METHODS

Loop engineering — write the pass test first, fix, re-run the identical script, and treat the difference between runs as the proof. **The one page** — one job per page, one price ladder, a clickable link for every doubtable claim. **Five-factor scoring** — weighted criteria with caps, floors and written reasons for every exclusion.

PUBLICATIONS

Six books published under a pen name in health and nutrition. Twelve long-form articles published to a written house style. An 83-page market book with 314 cited sources.
