AI Adoption & Enablement

Tyson Mandela

I help teams actually use AI — not just install it.

Half a million followers · 6 books · 12 years teaching complex ideas · building AI agents today

ABOUT

I help people adopt AI. For twelve years I built **an audience of half a million followers** and taught complex ideas in plain, useful language — **359,926 video views across 71 videos** — six books, 359,926 video views across 71 videos, with no paid acquisition. Today I build AI agents and the systems around them. I find where AI fits in a real workflow, design the use case, coach the team through it, and make sure adoption is safe and measurable. I explain technology the way people actually learn.

WHAT I BRING TO THE ROLE

AI adoption & enablement: generative AI · Microsoft Copilot · prompt engineering · spotting AI and automation opportunities in existing workflows

Teaching & engagement: workshops, coaching and practical learning resources · facilitation · stakeholder engagement · explaining technical ideas in plain language

Process & responsibility: process improvement · practical AI use cases · responsible adoption · data privacy and security · capabilities and limitations

EXPERIENCE

Founder & Principal Consultant — Twinthos

Bath, United Kingdom · 2024 – present · solo operator, no employees, no funding

- Built AI agents and the systems around them, specifying every job before any code — inputs, decisions, escalation, audit trail.
- Designed the delivery contract teams work to — inputs, decisions, evidence — and made that specification the product, not the software.
- Built the tooling that makes adoption safe: a 526-line document pipeline with a nine-check gate, a 32-page site auditor, and a source verifier that re-fetches every cited page.
- Priced and positioned the offer from external comparables; ran it solo with no funding.

Founder, Owner & Content Lead — Human Architect / Alkaline Architect

2013 – 2025 · health and nutrition publishing · exited

- Built an audience of half a million followers and 359,926 video views across 71 videos, with no paid acquisition, teaching complex ideas in plain, engaging language.
- Designed the learning content, digital products and systems that turned that audience into customers — teaching the why before the what.
- Published six books under a pen name while automating the daily workflow end to end.
- Sold the brand and its social handle — half a million followers — to Jason van Blerk of The Human Garage.

Founder — Humanitai CIC

Companies House 16891121 · current · community interest company

- Built a key-free Python scraper across four UK funding bodies that publishes 29 verified opportunities each week.

SELECTED WORK

- **Site auditor** — 32 pages at 24 checks each; drove local findings to zero.
- **Document pipeline** — 526-line builder plus a 353-line gate; zero failures on re-run.
- **Research register** — 114 UK firms, a named decision-maker at 100 of them.
- **Market book** — 83 pages, 314 cited sources.
- **Security pass** — found a server exposed to the internet with its history and secrets, then closed it.

METHODS

Loop engineering — write the test first, fix, re-run, treat the difference as the proof. **The one page** — one job per page, one price ladder. **Five-factor scoring** — weighted, with reasons.
