AI adoption, workflow design and training in plain English

Bath / Bristol, UK · twinthos@agentmail.to · twinthos.com · github.com/twinthos

20M monthly views at peak · **2,000+** students taught

SUMMARY

I work on AI adoption in plain English. Through HumanitAI CIC I run AI safety and digital inclusion training across the UK. At Twinthos I decide which recurring work is worth handing to AI, write the rules it works to, and check the result before it ships. Before that I founded and ran an online school for twelve years, and published a book and six ebooks.

KEY SKILLS

AI adoption — Choosing what to hand to AI, writing its rules, checking its output.

Training and teaching — Curriculum design and delivery, on camera and in the room.

Plain-English communication — Technical work explained so an owner can approve it unaided.

Workflow mapping · Written rules and handover · Course design · Publishing · Implementation · Adoption reviews

EXPERIENCE

Founder — Twinthos

Bath / Bristol, UK 2026 - present

- Runs AI consultation that separates the recurring work worth handing to AI from the work that should stay human.
- Designs the workflow, rules, tools and handover for each AI system, with a named person accountable for its output.
- Built the first landing page by hand in HTML, CSS and Git, then directed agents to build the rest.
- Researched 114 UK firms, 100 with a named decision-maker, before the first pitch.

Director — HumanitAI CIC

CIC · Companies House 16891121 Dec 2025 - present

- Runs AI safety education and digital inclusion training for people and organisations in the UK.

Founder — online school

Self-employed, creator and educator 2013 - 2025

- Built an online school of more than 2,000 students and designed every course in it.
- Grew organic social content to around 20 million views a month at peak.
- Built recurring revenue systems and digital products.
- Oxygen therapy and performance work with Novak Djokovic, Anthony Joshua and John Travolta, among others.

HOW I WORK

Plain English over jargon — every document is written so an owner who is not a technologist can approve it unaided.

Rules before tools — nothing ships until its boundaries, its rules and the person accountable for it are written down.

Evidence over assurance — a result counts when someone other than the person who did the work can check it, not when it is claimed.

TOOLS AND METHODS

Building and running the work — Hermes Agent, Claude Code and Codex

Site and publishing — HTML, CSS, Git and GitHub Pages

Daily operations — Google Workspace and Telegram
