Tyson Mandela

Founder, Twinthos

Bath / Bristol, UK · twinthos@agentmail.to · twinthos.com · github.com/twinthos

SUMMARY

I find the repeat work in a business, decide what an AI can safely take, and write the rules it follows. I run Twinthos's AI agents myself, and a named person approves anything that matters. Before Twinthos, I built an online school of over 2,000 students and grew organic social content to around 20 million views a month.

EXPERIENCE

Founder, Twinthos

2026 to present

- I built the company end to end: product, site, offer and pipeline.
- I built the first version of the website myself, then directed AI agents to build the rest.
- I built a site audit that checks every page against a fixed set of rules. It cleared every local defect, and the rest need DNS or hosting changes.
- I run the AI agents for email, messaging and publishing. Each job has a written spec, and a named person signs off anything consequential.
- I designed a scoring method for UK prospect lists, and every claim is re-checked at source.

Director, HumanitAI CIC

December 2025 to present

- HumanitAI is a UK community interest company that teaches AI safety and digital inclusion.

Founder, online school 2013 to 2025

- Built an online school and designed every course in it.
- Made short videos on camera every day.
- Built recurring-revenue systems and digital products.

SKILLS

Finding repeat work. I map the jobs a business does every week, then decide which an AI can take and which must stay with a person.

Writing the rules an AI follows. Each job gets a written spec: its inputs, who decides, when it must stop and ask, and what it must never do.

Checking work before it ships. Documents, websites and research pass automated checks, and claims are re-opened at their source.

Building for the web. I direct the design and build of the site, and I review every page before it goes live.

Teaching in plain English. I design courses and write them in plain English.

Pricing and offers. I set prices from outside comparables and review every offer before it goes live.

THE AUTHORITY LINE

The AI does the routine work: replies, record updates, bookings and follow-ups.

A named person decides anything that spends money, changes a price or commits the company.

TOOLS

Hermes Agent, AgentMail, Telegram Bot API, GitHub, Git, HTML, CSS, JavaScript. Python, directed with AI agents.
