SUMMARY

AI systems architect building managed digital employees that run jobs inside the tools a company already owns. Twinthos deploys AI agents with explicit job specs, human-in-the-loop approval, and machine-checked deliverables — so a 1,000-person firm can stand up an adoption-ready AI function in 48 hours, not 12 months. I write the system that prompts, acts, verifies, remembers and re-runs the agent; I do not hand-manage a chat window.

CORE COMPETENCIES

AI agents & agentic workflows • LLM orchestration • Automation & Python • Agent verification & release gates • Product & pricing • Market research • Source verification • Solo operations • Bristol / UK

EXPERIENCE

Founder — Twinthos · AI-agent / digital-employee platform

Built the company end to end: product definition, live site, document pipeline, backup, and 24-point audit. No employees, no outside funding. Set pricing from external comparables; use cases are triggered by job titles and delivery is measured weekly.

What it does: Agentic platform for multi-office property groups and professional services — Prospector finds automatable tasks; Coach Bot builds AI fluency; Compliance Watch keeps prompts safe; Adoption Dashboard measures ROI.

Scale: £2,500 setup + £750–£950/month per role, 3-month minimum.

Team & quality: A previously empty inbox → 114-firm prospect register with named decision-maker at 100 of them.

Technology: Python, Flask, Schedule, GitHub Actions, GitHub Pages, Tailscale; one CLI per agent with a defined job spec and a delivery contract.

Founder — Humanitai CIC · Community interest company (Companies House 16891121)

What it does: Helping people in the UK learn UK AI safety and education on digital inclusion — a mission-led CIC building AI safety curriculum and digital inclusion training for UK communities.

Human Architect / Alkaline Architect · Health and nutrition brand (2013–2025)

What it does: Grew an audience to 359,926 views across 71 videos with no paid acquisition.

Content engine: Daily camera content, viral content, animation content creation, virality, communication & marketing, branding — 20M views monthly.

Technology: Social media content engine, prompt library, YouTube automation.

Outcome: Brand and social handle sold to Jason van Blerk of The Human Garage.

SELECTED PROJECTS

Digital-employee platform: 526-line builder + 353-line gate, 9 machine checks, 0 failures on re-run; every change verified independently.

Live-site auditor: 32 pages × 24 checks, local findings driven to 0 (GitHub Pages, no CDN, so www cert requires DNS).

Market book: 83-page register with 314 clickable source links; 77 of 80 named people re-confirmed by re-opening the cited page.

Recruitment audit: 146 sessions, 4,031 places, 57 tickets sold, 1.41% conversion across 28 /book/ links.

GitHub: 21 public repositories; 289 commits in 18 days on the live site; private backup repo, 173 paths, HEAD match verified.

EDUCATION

MSc Artificial Intelligence · University of Bristol · 2018–2019 (Companies House 16891121)

CERTIFICATIONS

AI Adoption Trainer — Microsoft Copilot, prompt engineering, AI safety & compliance · 2026

SELECTED PRESS / SPEAKING

Press: UK AI-agent and digital-employee market analysis, 83-page market book (2026)

Speaking: AI-adoption workshops for professional services firms, Bristol and online
