TWINTHOS · WHAT WE SELL · 21 OCTOBER 2026

It is not a chatbot.
It is a job that gets done.

One defined job, inside the systems you already own, run by an agent that remembers the business — and answers to a named human.

Three parts. All three, or it is not the product.

- **The Brain.** Your rules, facts, tone, past decisions and exceptions. It does not reset, and it never invents a memory.
- **The Employee.** One job with a written definition: what goes in, what comes out, what it must never do, when it escalates.
- **The Desk.** It sits in the tools you already own. No integration project. First job live in about two hours.

Demos are labelled illustrative. No client has been delivered this as a paid service yet, and we say so.

What people think they are buying

THE THING	WHAT IT ACTUALLY IS
ChatGPT, Grok, Muse, Claude	A general assistant, sold per seat to anyone. No knowledge of your firm, no permissions, no audit, nobody accountable.
A chatbot	Waits to be asked, produces text. Your staff still do the work.
A copilot	Makes a person faster at the same task. Headcount stays.
A retrained model	We make no such claim. The model is fuel; the brain and the record are the product.
An integration project	Screen-based agency: no API, no vendor ticket, no six-month review.

Why the difference is structural

- **It persists.** The client’s customer, pricing rule and tone are already known at 3am on a Sunday.
- **It is triggered, not prompted.** Work arrives; the employee acts. Nobody has to remember it exists.
- **It is bounded.** Permissions, an escalation rule, and a named human who signs off anything consequential.
- **The model is swappable.** Change it tomorrow and the employee keeps its job, its knowledge and its history.

What that does to the price

BUY	ANNUAL	WHAT IT MUST DO
One UK admin	**£35,000**	1,950 hours, 25 days off, notice period
Foundation	**£9,000**	One workflow, not a role
Brain + employee	**£60,000**	Replace 1.7 salaries, or add more than £60k of revenue

£28,000 salary × 1.25 loading for employer NIC, pension and kit — an assumption, stated as one. £28k × 1.25 = £35,000; ÷ 12 = £2,917/month; ÷ 1,950 hours = £17.95/hour.

The jobs we can take in week one

- **Document intake** — a PDF or email arrives, the fields are extracted and the record is filed.
- **Chasing** — invoices, references, records, certificates, outstanding items, on a schedule.
- **Booking and scheduling** — inbound requests turned into confirmed slots, with confirmations sent.
- **Compliance evidence** — what is missing per site or per file, chased until it is complete.

Each of these is one job with a definition. We do not sell “AI transformation”, because that cannot be measured and cannot be finished.

If you say yes today

- **£999 fixed — Operations Audit, five working days.** One job named, measured against your own documents, and a working agent demonstrated on your material.
- **You get a decision, not a report.** Deploy, or stop with the evidence in your hand.
- **If you deploy:** £2,500 setup + £750/month for the Foundation build, first job live within two weeks.
- **A desk under £5,000/month** replaces roughly 1.7 admin salaries — price it that way, not against a subscription.

Pricing is under validation — this quote is fixed for this engagement, and every number above shows its arithmetic.

The only promise

Your work handled, your time returned — with a name attached to it.
