Companies With High Bottlenecks — AI Pitch Database

Companies With High Bottlenecks — AI Pitch Database

Research compiled: September 2026 | Sources: web search, industry reports, case studies, public data **Purpose:** Target list for Twinthos/Dewey agent business — companies with proven operational pain, ability to pay, and clear AI fit

---

HOW TO READ THIS DOCUMENT

Each entry has: - **Company/Industry segment** — who they are - **Bottlenecks** — specific, evidenced pain points - **Pitch** — what to say to them - **Close likelihood** — estimated probability + why - **How Twinthos/Dewey helps** — multiple distinct ways the agent system adds value

Close likelihood scale: - HIGH (60%+) — proven case studies exist, urgent pain, budget available, decision-maker accessible - MEDIUM (30-60%) — pain exists but sales cycle longer, or budget needs proving, or competitive - LOW (<30%) — structural barriers (regulation, budget, timing, access)

INDUSTRY 1: LAWYERS — LAW FIRMS (10-50 LAWYERS, $2M-$15M REVENUE)

Evidence base

- 78% of US law firms not using any AI tools as of year-end 2024 (Embroker survey)
- 74% of billable law firm tasks exposed to AI automation (Clio 2024 Legal Trends)
- PwC: 80% of legal work has “meaningful barriers” to full automation — but 22% is “relatively easy to automate” and 39% has “moderate barriers”
- Law firms expecting AI to unlock 16% of chargeable hours in 2026 (up from 11% in 2025)
- 53% of firms concerned about clients using automation to reduce demand; 73% worried about “tech arms race”
- 10% year-over-year increase in direct expenses for law firms
- AI can reduce up to 23% of lawyers’ everyday tasks (ABA)
- 87% of attorneys more willing to work for companies with AI tools

Specific bottleneck evidence

- **Undefined workflows** — “After a decade of working with law firms, I’ve noticed common bottlenecks in workflows that involve more than one point of contact, such as contract approvals, document reviews and, most importantly, client communication. If all of these have no official standards, AI will not be there to save the day.” (Forbes, Feb 2026)
- **Poor onboarding** — “One of the leading reasons new team members disengage or leave early” — manual and fragmented onboarding contributes to turnaround delays, operational risks, compliance issues

- **Inefficient intake processes** — “The first real contact a potential client has with a firm, the intake, sets the tone for conversion, client satisfaction and internal efficiency. Firms can’t rely on untrained intake specialists, inconsistent data capture and delayed responses.”
- **Time entry** — One firm panelist outlined AI-powered time-entry system that auto-generates timesheets based on work activity, letting professionals simply edit rather than manually log hours
- **Document creation and correspondence** — “AI and automation can reduce up to 23% of everyday tasks for lawyers”
- **Client communication gaps** — intake specialists untrained, inconsistent data capture, delayed responses
- **Administrative burden** — “There’s real value on the administrative side here, real efficiency dollars” — most firms treat AI for support functions as second-tier priority despite being where immediate dollars are

Companies/segments to target

1. **Mid-size personal injury firms (10-30 lawyers, $3M-$10M)** — high volume intake, document-heavy, repetitive forms, settlement tracking. PI firms have the most repetitive administrative work of any practice area.
2. **Family law firms (5-20 lawyers, $2M-$8M)** — paper-heavy, form-driven, client communication intensive, deadline-driven (court dates, filings)
3. **Real estate/property law firms (5-15 lawyers, $2M-$6M)** — transaction-heavy, document standardization possible, repeatable workflows
4. **Insurance defense firms (10-50 lawyers, $5M-$15M)** — high volume, repetitive document review, settlement communications, calendar management

Pitch

“74% of your billable tasks can be automated. 78% of firms your size aren’t using AI yet — which means you’re either losing ground or about to. We deploy AI employees that handle intake, document creation, time entry, client follow-up, and deadline tracking. First agent in 48 hours. $5K/month. You don’t touch tokens or infrastructure — you get a digital employee that knows your practice.”

Close likelihood: HIGH (65%+)

- Proven case studies: firms using AI for time entry, intake, document automation already seeing ROI
- Urgent pain: 10% YoY expense increase, competitive pressure, clients expecting AI fluency
- Budget available: $2M-$15M revenue firms can afford $5K/month
- Decision-maker accessible: managing partners make the call, often reachable via LinkedIn/content
- Nick’s own framing: “If it’s a law firm and you have a partner who wants to buy your services, you can have all of these things out of the blocks for your agents that you set up”
- Entering wedge: start with administrative (time entry, intake) — lowest risk, fastest ROI, then expand to practice-area work

How Twinthos/Dewey helps — 5 distinct ways

1. **AI intake agent** — Captures leads 24/7 from website, phone, email. Qualifies using firm’s criteria. Routes to right attorney. Schedules consultation. Sends engagement info. Operates from its own Orgo computer with access to firm’s practice management system via Composio.
2. **Document automation agent** — Fills templates from intake data. Generates initial drafts of engagement letters, pleadings, demand letters, settlement agreements. Checks for consistency. Routes for attorney review. Learns firm’s preferences over time.
3. **Time entry agent** — Auto-generates timesheets from activity (emails, document work, calls, calendar). Attorney reviews and edits rather than manually logging. Integrates with billing system. Captures missed time — firms leave money on table from unrecorded work.

4. **Deadline/calendar agent** — Tracks court dates, filing deadlines, statute of limitations, client follow-ups, retainer renewals. Sends reminders. Escalates when approaching. Operates continuously — doesn't forget a deadline because it was a busy week.
5. **Client communication agent** — Status updates, appointment reminders, document request follow-ups, invoice reminders, answer common questions. "Is my case still on track?" "When will I hear from my attorney?" — agent answers from case context, escalates to human when needed.

INDUSTRY 2: INSURANCE — AGENCIES & BROKERS (5-50 AGENTS, $2M-$20M REVENUE)

Evidence base

- 82% of insurers believe AI will dominate the industry's future, yet only 14% have fully integrated AI into financial operations (AutoRek 2026 survey of 250 US/UK insurance managers)
- 6% still report no AI usage at all in finance and reconciliation workflows
- Transaction volumes projected to rise 29% over next two years
- Settlement cycles already lengthening — "high transaction volumes, use of multiple systems and fragmented data, dependence on spreadsheets, and additional complexity from cancellations, adjustments and partial payments"
- "The Operational Divide of 2026" — early adopters reshaping cost base while risk-averse firms stay in pilot mode or depend on spreadsheets
- Fragmentation directly increases reconciliation complexity, audit exposure, risk of misstatements
- "Automation layered on top of a fragmented architecture cannot scale sustainably"

Specific bottleneck evidence

- Settlement cycle delays — "already-long settlement cycles are likely to lengthen further unless firms compress timelines or automate more of their reconciliation activity"
- Spreadsheet dependence — "dependence on spreadsheets" is a recurring driver of longer settlement times
- Multi-system fragmentation — "use of multiple systems and fragmented data"
- Reconciliation complexity — increasing audit exposure, risk of misstatements
- Compliance documentation — regulatory requirements, annual reviews, policy renewals
- Policy renewal management — hundreds of policies expiring at different dates, manual outreach
- Lead response — inbound leads from websites, referrals, partnerships — time-sensitive, often missed
- Claims follow-up — checking status, pushing adjusters, client communication

Companies/segments to target

1. **Independent insurance agencies (10-50 agents, $3M-$15M)** — multiple carrier relationships, manual policy management, renewal tracking across hundreds of policies, lead response from multiple channels, compliance documentation
2. **Commercial insurance brokers (5-20 brokers, $2M-$10M)** — high-value policies, complex renewals, client communication intensive, proposal generation, market analysis
3. **P&C insurance agencies (10-30 agents, $3M-$12M)** — claims-heavy, policy renewal volume, client communication, rate comparison across carriers
4. **Employee benefits brokers (5-15 brokers, $2M-$8M)** — enrollment season crunch, compliance documentation, client communication, plan comparison, renewal negotiation

Pitch

“82% of your peers know AI is the future — but only 14% have actually integrated it. Your settlement cycles are lengthening while transaction volumes rise 29%. You’re running on spreadsheets and multiple disconnected systems. We deploy AI employees that handle reconciliation, policy renewals, lead response, claims follow-up, and compliance documentation. First agent in 48 hours. $5K/month. Unlimited everything. You don’t touch tokens.”

Close likelihood: HIGH (60%+)

- Clear evidence of operational divide — 82% vs 14% gap is a massive opportunity
- Urgent pain: settlement cycles lengthening NOW, 29% volume increase coming, audit exposure growing
- Budget available: $2M-$20M agencies can afford $5K/month
- Proven value: settlement cycle compression, reconciliation automation, lead response — all have measurable ROI
- Decision-maker accessible: agency owners, managing brokers — reachable via industry events, LinkedIn, referrals
- Nick’s framing applies: “You’re selling an AI employee, you’re not selling an AI agent”

How Twinthos/Dewey helps — 5 distinct ways

1. **Renewal management agent** — Tracks expiring policies across all carriers. Generates comparison quotes from multiple carriers. Sends renewal outreach sequence to clients. Schedules appointments. Escalates expiring policies approaching deadline. Operates from its own Orgo computer with access to agency management system.
2. **Lead response agent** — Captures inbound leads from website, referrals, partnerships, social. Qualifies using agency criteria. Schedules appointments. Sends initial coverage information. Follows up persistently. Operates 24/7 — doesn’t miss leads because it’s after hours or weekend.
3. **Reconciliation agent** — Pulls data from multiple systems (policy admin, claims, billing, accounting). Reconciles discrepancies. Flags anomalies. Generates reconciliation reports. Reduces settlement cycle time. Reduces audit exposure. Addresses the “fragmented data” bottleneck directly.
4. **Claims follow-up agent** — Monitors claim status across carriers. Follows up with adjusters on pending claims. Updates clients on claim progress. Flags claims approaching deadlines. Communicates claim status changes. Reduces “no one told me” client frustration.
5. **Compliance documentation agent** — Tracks regulatory requirements by state/line of business. Generates required documentation. Maintains compliance files. Alerts on upcoming compliance deadlines. prepares for audits. Addresses the regulatory burden that keeps agencies from scaling.

INDUSTRY 3: MANUFACTURERS & CPG (10-200 EMPLOYEES, $5M-$50M REVENUE)

Evidence base

- CPG manufacturers: 15.2% of mean manufacturing revenue lost today due to delays, downtime, rework, quality deviations, suboptimal asset use (Schneider Electric 2026 survey of 1,453 global executives)
- Expected to worsen: 21.37% next year, 29.14% by 2030
- Today only 13% of CPG manufacturers say AI is embedded end-to-end in core operations
- By 2030, 37% expect AI to be core — tripling in 4 years
- 32.7% anticipate 50-74% ROI on AI projects; 7.9% forecast >100% ROI (payback under 1 year)
- 73% of CPG companies still rely on conventional time-series forecasting (65-75% accuracy)
- AI-powered demand sensing achieves 88-94% accuracy
- Manufacturing downtime costs CPG companies $2.1 billion annually
- Average OEE: 68% vs world-class 85%+ — gap represents enormous value creation

- 44% of CPG leaders looking to AI/ML; 43% to increasing automation (Rockwell 2025)
- McKinsey: strong majority of CPG companies piloted AI in at least one function, but only ~1 in 5 scaled beyond single use case
- Bain: 90% of CPG executives thinking about AI, only 6% have a plan for using it to create business value

Specific bottleneck evidence

- **Demand forecasting** — 73% still use conventional methods at 65-75% accuracy. AI achieves 88-94%. PepsiCo: forecast accuracy jumped from 71% to 91% MAPE, finished goods inventory dropped 12% ($340M working capital released), stockouts fell 34%, safety stock costs declined 18%, $245M annual EBITDA impact from inventory optimization alone
- **Manufacturing downtime** — $2.1B annual cost to CPG. PE-backed beverage manufacturer: unplanned downtime fell from 340 hours to 89 hours (74% reduction), OEE jumped from 73% to 82%, maintenance costs declined 12%, $46.9M annual EBITDA impact
- **Quality control** — mostly manual inspection. AI visual inspection can automate. Defect rates, downtime, QC costs
- **Sales hierarchy updates** — Auxis case: 85% error rate in sales hierarchy update process, extensive rework. RPA automation eliminated the error rate, saved 2,000+ hours of tedious manual work per year
- **DOT compliance** — Auxis case: distribution supervisors manually pulling and uploading vehicle inspection reports and hours of service for 1,300+ drivers. RPA automation saved 9,300+ hours of work and $370,000+ per year. Identified 15% of reported violations as false
- **Force-ship order errors** — Auxis case: 90,000 errors out of 1.17M force-shipped orders in a single quarter (7.7% error rate). Teams spent 30 minutes reworking each order. Force-ship automation expected to deliver $5-7M in revenue recognition
- **Inventory management** — excess safety stock, preventable stockouts, unnecessary markdowns, promotional spend missing the mark
- **Data fragmentation** — “product information lives in regional spreadsheets and disconnected PIM systems; orders flow through distributor systems the manufacturer can’t see; promotions planned in one tool and evaluated months later in another”

Companies/segments to target

1. **Mid-size food & beverage manufacturers (50-200 employees, $10M-$50M)** — demand forecasting pain, inventory management, production scheduling, quality inspection, packaging, regulatory compliance, distributor ordering
2. **Personal care/cosmetics manufacturers (20-100 employees, $5M-$20M)** — SKU proliferation, batch tracking, quality control, regulatory compliance (ingredient labeling), packaging, order processing
3. **Small appliance/hardware manufacturers (30-150 employees, $5M-$30M)** — order processing, inventory, quality control, supplier coordination, shipping/logistics, customer service for orders
4. **Wholesalers/distributors (10-100 employees, $5M-$30M)** — order processing from multiple channels, inventory across locations, price updates, shipping coordination, returns processing, customer quoting

Pitch

“15.2% of your revenue is being lost to delays, downtime, rework, and quality issues. That’s expected to hit 29% by 2030. Only 13% of manufacturers have AI embedded end-to-end — but 37% will by 2030. The ones who move now capture the gap. We deploy AI employees that handle order processing, inventory tracking, quality documentation, compliance reporting, and supplier coordination. First agent in 48 hours. $5K/month. You don’t touch tokens or infrastructure.”

Close likelihood: HIGH (60%+)

- Massive documented pain: 15.2% revenue loss today, heading to 29% by 2030 — this is real money

- Proven case studies: PepsiCo ($245M EBITDA from inventory optimization), beverage manufacturer ($46.9M from predictive maintenance), Auxis CPG client ($5-7M from force-ship fix)
- Budget available: $5M-$50M manufacturers can afford $5K/month especially when ROI is proven
- Urgency: “The expectation gap is the strongest signal of urgency we’ve seen in years” (Schneider Electric)
- Decision-maker accessible: owners, COOs, operations directors — reachable via industry associations, LinkedIn, trade shows
- Nick’s computer-use angle: manufacturers often have legacy systems with no API — exactly where computer-use agents shine. “If you can describe a process in words… you can create a computer use agent for it with natural language”
- Entering wedge: order processing, inventory tracking, compliance documentation — high-volume, rules-based, low-risk

How Twinthos/Dewey helps — 6 distinct ways

1. **Order entry agent** — Receives POs from email, fax, portal, sales reps. Enters into ERP/system. Confirms with customer. Flags anomalies. Operates 24/7. Addresses: “PO processing from multiple channels” bottleneck.
2. **Inventory reorder agent** — Monitors stock levels across locations. Triggers purchase orders when thresholds hit. Coordinates with suppliers. Tracks lead times. Adjusts for demand signals. Prevents stockouts and excess inventory. Addresses: inventory management, supplier coordination.
3. **Quality documentation agent** — Compiles inspection reports from various sources. Generates quality certificates. Tracks lot/batch information. Files compliance documentation. Flags quality issues. Addresses: “100% manual QC” bottleneck, quality documentation.
4. **Shipping/logistics agent** — Tracks shipments across carriers. Updates customers on status. Flags delays. Coordinates with warehouse. Generates shipping documentation. Addresses: shipping coordination bottleneck, customer service for order status.
5. **Compliance reporting agent** — Generates required regulatory reports (FDA, OSHA, DOT, etc.). Tracks compliance deadlines. Maintains documentation. Files certificates. Addresses: compliance documentation bottleneck, regulatory burden.
6. **Supplier coordination agent** — Monitors supplier lead times. Follows up on pending orders. Tracks deliveries. Flags quality issues from supplier shipments. Communicates with suppliers. Addresses: supplier communication, procurement coordination.

INDUSTRY 4: WHOLESALERS & DISTRIBUTORS (10-100 EMPLOYEES, $5M-$30M REVENUE)

Evidence base

- Wholesalers face same manufacturing bottlenecks plus distribution-specific ones: multi-location inventory, multi-channel order processing, price volatility, shipping coordination, returns
- CPG data applies directly: 73% still using conventional forecasting; inventory management is core pain
- “Products move through distributors and bottlers to thousands of fragmented outlets” — AB InBev BEES platform: 75% of orders generated by machine learning
- HEINEKEN AIDDA: AI sales advisor supporting 490,000 customers across 8 markets, 3,700+ sales reps, lifted gross profit 3-4% in Mexico
- Bain: scaling AI could improve consumer products operating margins by 3-5 percentage points
- “The hardest AI problems are channel visibility, route to market, and distributor-led ordering”

Specific bottleneck evidence

- Multi-location inventory management — stock across warehouses, stores, in-transit

- Order processing from multiple channels — catalog, web, sales reps, phone, email
- Price updates across systems — when costs change, updating everywhere is manual and error-prone
- Customer quoting — often manual, repetitive, especially for custom/special orders
- Shipping coordination — multiple carriers, tracking, exception handling
- Returns processing — RMA handling, inspection, restocking, credit processing
- Sales rep support — reps spending time on administrative order entry instead of selling
- Demand forecasting — same CPG pain: 73% using conventional methods, missing demand signals

Companies/segments to target

1. **Foodservice distributors (20-100 employees, $10M-$40M)** — high order volume, frequent small orders, perishable inventory, route planning, customer ordering portals, delivery coordination
2. **Industrial supply wholesalers (30-150 employees, $10M-$50M)** — SKU proliferation (thousands of part numbers), technical specs, customer quoting, inventory across locations, supplier coordination, order processing
3. **Building supply distributors (20-80 employees, $5M-$25M)** — seasonal demand swings, large SKU count, customer quoting, inventory management, delivery coordination, contractor relationships
4. **Agricultural supply distributors (15-60 employees, $5M-$20M)** — seasonal spikes, inventory management, customer ordering, supplier coordination, compliance (fertilizer, pesticide regulations)

Pitch

“73% of companies like yours still use conventional forecasting at 65-75% accuracy. AI achieves 88-94%. Your order processing, inventory tracking, and quoting are eating your team’s time. We deploy AI employees that handle order entry, inventory reorder, customer quoting, shipping coordination, and returns. First agent in 48 hours. $5K/month.”

Close likelihood: MEDIUM-HIGH (55%+)

- Pain is real and documented (CPG data applies directly)
- Budget available for $5M-$30M wholesalers
- Computer-use angle strong: many wholesalers run on legacy systems, ERPs without good APIs, spreadsheets
- Decision-maker accessible: owners, operations managers
- Slightly lower than manufacturing because wholesaler pain is less “sexy” and sometimes seen as less urgent
- Entering wedge: order entry, inventory tracking — clear ROI, low risk

How Twinthos/Dewey helps — 5 distinct ways

1. **Order processing agent** — Receives orders from all channels (web, email, phone, sales rep entry). Enters into system. Confirms with customer. Flags stock issues. Generates order confirmation. Operates 24/7.
2. **Inventory sync agent** — Monitors stock across all locations. Updates systems in real-time. Flags discrepancies. Triggers replenishment. Generates inventory reports. Prevents overselling. Addresses: multi-location inventory management.
3. **Customer quoting agent** — Generates quotes from current pricing, inventory availability, specs. Sends to sales reps or customers. Updates when costs change. Tracks quote status. Addresses: manual quoting bottleneck, price update propagation.
4. **Shipping coordination agent** — Tracks shipments across carriers. Updates customers. Flags delays. Coordinates with warehouse for picking/packing. Generates shipping documentation. Addresses: shipping coordination, customer service for order status.
5. **Returns processing agent** — Receives return requests. Validates against policy. Generates RMA. Tracks return receipt. Inspects condition. Processes restocking or credit. Updates inventory. Addresses: returns

processing bottleneck.

INDUSTRY 5: REAL ESTATE AGENCIES & BROKERS (10-100 AGENTS, $3M-$20M REVENUE)

Evidence base

- “When Insurance Delays Become Boardroom Headlines” — rising premiums threw coverage out of alignment with lender requirements, triggering week-long negotiations just to get the deal across the finish line. “The delay cost the firm nearly two weeks of interest carry and jeopardized a hard-won rate lock.”
- “Insurance, once an afterthought buried deep in closing checklists, is now a critical driver of cost, speed, and certainty”
- “Real estate executives are paying more, waiting longer, and receiving less transparency than ever before”
- Lenders and loan servicers “equally burdened by outdated insurance compliance processes” — “legacy systems, often built for oversight rather than real-time action, create significant friction — leading to manual workarounds, delayed approvals, and increased operational costs”
- “Insurance is no longer just a line item — it’s become a transaction bottleneck” (RealComm, Sep 2025)
- PropTech, InsurTech, FinTech convergence: “insurance is moving from a costly drag on deals to a strategic advantage”

Specific bottleneck evidence

- **Insurance verification delays** — coverage alignment with lender requirements triggers week-long negotiations, delays deals, costs interest carry, jeopardizes rate locks
- **Transaction coordination** — contract deadlines, inspection dates, closing checklists, HOA questionnaires, title issues, appraisal scheduling
- **Lead response** — internet leads (Zillow, Realtor.com, website) go cold fast if not contacted immediately
- **Listing management** — updating listings across MLS, portals, social media, flyers, property details
- **Showing coordination** — scheduling, confirming, reminders, feedback collection, calendar management
- **Client communication** — market updates, property alerts, appointment reminders, transaction status updates

Companies/segments to target

1. **Residential real estate brokerages (20-100 agents, $5M-$20M)** — lead response, transaction coordination, listing management, showing scheduling, client communication, marketing coordination
2. **Commercial real estate firms (10-50 agents, $5M-$25M)** — lease management, tenant communication, property documentation, market analysis, transaction coordination, insurance/permitting coordination
3. **Property management companies (10-50 properties, $2M-$10M)** — maintenance request handling, tenant communication, rent collection follow-up, lease renewal tracking, inspection scheduling, vendor coordination

Pitch

“Insurance delays are now a boardroom headline — week-long negotiations to get deals across the finish line, costing thousands in interest carry. Your transaction coordination, lead response, and listing management are eating your agents’ time. We deploy AI employees that handle lead response, transaction coordination, listing distribution, and client communication. First agent in 48 hours. $5K/month.”

Close likelihood: MEDIUM (40-50%)

- Pain is real and well-documented (insurance delays, transaction coordination burden)
- Budget available for $3M-$20M brokerages
- Slightly lower close likelihood because: real estate is hyper-local and relationship-driven, agents are independent contractors (who pays?), technology adoption varies wildly by broker/owner
- Computer-use angle: MLS systems, portal uploads, document management — often web-based, good fit for computer-use agents
- Decision-maker accessible: broker-owners, managing brokers — reachable via industry events, LinkedIn, local associations
- Entering wedge: lead response agent (clear ROI: leads go cold in minutes), transaction coordinator (clear time savings)

How Twinthos/Dewey helps — 5 distinct ways

1. **Lead response agent** — Captures leads from Zillow, Realtor.com, website, social. Responds within minutes (not hours). Qualifies using agent criteria. Schedules viewing appointments. Sends property information. Follows up persistently. Operates 24/7. Addresses: “internet leads go cold fast” bottleneck.
2. **Transaction coordinator agent** — Tracks contract deadlines, inspection dates, closing milestones, HOA questionnaire due dates, title commitment dates, appraisal scheduling. Sends reminders to agents, clients, vendors. Generates status updates. Flags approaching deadlines. Addresses: transaction coordination bottleneck, missed deadline risk.
3. **Listing distribution agent** — Posts new listings to MLS, Zillow, Realtor.com, social media, email blasts. Updates listing information across all platforms when changes occur. Generates property flyers. Tracks listing status. Addresses: listing management bottleneck, time spent on distribution.
4. **Showing coordinator agent** — Schedules showings, sends confirmations, collects feedback, manages agent calendars, sends reminders, coordinates with sellers. Addresses: showing coordination bottleneck.
5. **Client communication agent** — Sends market updates, property alerts matching client criteria, appointment reminders, transaction status updates, post-closing follow-ups. Answers common questions. Addresses: client communication bottleneck, agent time spent on repetitive communication.

INDUSTRY 6: MARKETING AGENCIES ($500K-$5M REVENUE, 5-30 EMPLOYEES)

Evidence base

- Nick specifically calls out marketing agencies as a top vertical: “marketing agencies, law firms, insurance agencies, manufacturers, wholesalers, and real estate agencies” — “They want to be a full-stack AI company. Meaning they want to be like fully automated with AI. That’s the dream outcome.”
- “The common pattern with all of them is they want to be a full-stack AI company”
- “These categories are large, right? Like law, that’s really large. Insurance agency, that’s really large. Manufacturing, that’s large. Wholesalers, large.”
- Agencies are people businesses: “When you have a lot of people, there’s a lot of waste in terms of efficiency”
- Agencies want to adopt AI but “they don’t know how”
- Common agency bottlenecks: client onboarding, reporting, content production at scale, lead follow-up, account management across dozens of clients, deadline coordination
- “You’re not a commodity, you’re not just selling Claude code. You’re not just selling ChatGPT. You’re selling a vertically specific, industry-specific agent”

Specific bottleneck evidence

- **Client onboarding** — repetitive setup for each new client: assets collection, tracking setup, access credentials, welcome sequences, initial projects
- **Reporting** — pulling data from Google Ads, Meta, analytics, social platforms into client reports — highly repetitive, time-consuming, often manual
- **Content production** — writing posts, finding images, scheduling across platforms, adapting content for different clients/channels
- **Lead follow-up** — inbound leads from ads, forms, events — response time matters, often delayed
- **Account management** — staying on top of dozens of client accounts, deadlines, deliverables, communications
- **Deadline coordination** — campaign launches, content calendars, deliverables across multiple clients and platforms

Companies/segments to target

1. **Small digital marketing agencies (5-15 employees, $500K-$2M)** — client onboarding, reporting, content scheduling, lead follow-up — high pain, low budget, but good case study candidates
2. **Full-service marketing agencies (15-50 employees, $2M-$5M)** — all of the above plus: campaign management, account coordination, multiple client workflows, deadline tracking
3. **SEO/content marketing agencies (5-20 employees, $500K-$2M)** — content production at scale, keyword tracking, rank monitoring, client reporting, backlink monitoring
4. **Social media marketing agencies (5-15 employees, $500K-$1.5M)** — content creation, scheduling across platforms, community management, trend monitoring, client reporting

Pitch

“You’re running a marketing agency. You have 20 clients. Each one needs onboarding, monthly reporting, content scheduling, lead follow-up, and account management. Your team spends more time on administration than strategy. We deploy AI employees that handle client onboarding, reporting, content scheduling, lead follow-up, and deadline coordination. First agent in 48 hours. $5K/month. You get your team’s time back.”

Close likelihood: MEDIUM (35-45%)

- Pain is real but agencies often have thinner margins than other verticals
- Budget available for $500K-$5M agencies ($5K/month is 12-120% of monthly revenue — significant but justifiable if ROI clear)
- Competitive: many AI automation agencies targeting marketing agencies specifically
- Nick’s own advice: “you don’t have to start super niche from the beginning. In fact, you can always niche down after trying a marketing agency, trying a law firm, trying all these different industries, seeing what works well for you, where the market pulls you, and then going super vertical”
- Marketing agencies are a good starting point for learning, not necessarily the best long-term vertical
- Entering wedge: reporting automation (clear ROI, easy to demonstrate), client onboarding (time savings)

How Twinthos/Dewey helps — 5 distinct ways

1. **Client onboarding agent** — Collects client assets, access credentials, brand guidelines, goals. Sets up tracking systems. Sends welcome sequence. Generates onboarding documentation. Coordinates with team. Addresses: “client onboarding is repetitive” bottleneck.
2. **Reporting agent** — Pulls data from Google Ads, Meta, analytics, social platforms, SEO tools. Compiles into client reports. Writes narrative summary. Sends to clients. Tracks KPIs. Flags anomalies. Addresses: “pulling data from multiple platforms into reports” bottleneck.
3. **Content scheduling agent** — Drafts social posts based on client strategy. Finds/creates images. Schedules across platforms. Adapts content for different channels. Monitors performance. Suggests optimizations. Addresses: content production at scale bottleneck.

4. **Lead follow-up agent** — Captures inbound leads from agency's own marketing, referrals, events. Qualifies. Schedules discovery calls. Sends follow-up sequences. Nurtures long-term. Addresses: lead response bottleneck for the agency itself.
5. **Account management agent** — Tracks client deadlines, deliverables, campaign launches, contract renewals. Sends reminders. Generates status updates. Flags issues. Coordinates with team members. Addresses: account management across dozens of clients bottleneck.

CROSS-INDUSTRY PATTERNS — UNIVERSAL BOTTLENECKS

These apply to ALL the above industries. Nick's observation:

"The decision maker at the end of the day has very similar problems, no matter what the industry is. They have too many emails, too many meetings, too many follow-ups, too many open loops. They have context over so many different projects and places and people to keep track of."

Universal bottleneck 1: Inbox overload

- **Who has it:** Every executive in every industry above
- **What it looks like:** Hundreds of unread emails, important ones buried, responses delayed days, "did anyone reply?" anxiety
- **Agent solution:** AI employee that triages inbox, drafts responses to routine emails, flags urgent ones, follows up on unanswered threads, operates 24/7
- **Pitch angle:** "Your inbox is costing you decisions. We deploy an AI employee that handles your inbox — triaging, drafting, following up — so you only see what needs your attention."

Universal bottleneck 2: Meeting overload

- **Who has it:** Every executive
- **What it looks like:** Calendar full of meetings, no execution time, meetings about meetings, scheduling back-and-forth
- **Agent solution:** AI employee that manages calendar, schedules meetings, prepares agendas, takes notes, follows up on action items, declines low-value meetings
- **Pitch angle:** "Your calendar is full of meetings about work instead of doing work. We deploy an AI employee that handles scheduling, agendas, notes, and follow-ups — giving you execution time back."

Universal bottleneck 3: Follow-up failure

- **Who has it:** Every industry — leads go cold, clients don't hear back, colleagues wait for responses, prospects drift away
- **What it looks like:** Leads not contacted within 24 hours, client questions unanswered for days, colleague requests sitting unreplied, "I'll follow up" never happens
- **Agent solution:** AI employee that tracks every open loop — leads, client questions, colleague requests, prospect follow-ups — and follows up persistently until resolved
- **Pitch angle:** "Things fall through the cracks because no one follows up. We deploy an AI employee that never misses a follow-up — leads, clients, colleagues — it tracks every open loop and closes it."

Universal bottleneck 4: Open loop fatigue

- **Who has it:** Every executive — "too many open loops" is Nick's exact phrase
- **What it looks like:** Projects, tasks, commitments scattered across email, Slack, spreadsheets, sticky notes, memory. No single source of truth. Constant mental load of "what am I forgetting?"

- **Agent solution:** AI employee that captures every open loop into a single system, tracks status, sends reminders, escalates when needed, maintains the list so the executive doesn't have to
- **Pitch angle:** "You have too many open loops. Projects, tasks, commitments — they're everywhere and you're holding it all in your head. We deploy an AI employee that captures, tracks, and closes every open loop so you stop carrying the mental load."

Universal bottleneck 5: Context switching / fragmented tools

- **Who has it:** Every company with more than 2 software tools
- **What it looks like:** Data in one system, communication in another, tasks in a third, documents in a fourth. Switching between them constantly. Nothing connected.
- **Agent solution:** AI employee that operates across all tools — reads from one, writes to another, connects the dots, maintains continuity. Doesn't care how many systems there are.
- **Pitch angle:** "Your data is in one system, your communication in another, your tasks in a third. You're stitching it together manually. We deploy an AI employee that operates across all your tools — connecting, coordinating, maintaining continuity — without you having to switch contexts."

CLOSE LIKELIHOOD SUMMARY TABLE

Industry	Segment	Revenue Range	Close Likelihood	Why
Law firms	Personal injury, family law (10-30 lawyers)	$2M-$10M	HIGH (65%+)	Proven case studies, 78% not using AI, 74% tasks automatable, urgent expense pressure, accessible decision-makers
Law firms	Insurance defense (10-50 lawyers)	$5M-$15M	HIGH (60%+)	High volume, repetitive work, document-heavy, settlement tracking, budget available
Insurance	Independent agencies (10-50 agents)	$3M-$15M	HIGH (60%+)	82% vs 14% AI gap, settlement cycles lengthening NOW, 29% volume increase coming, clear ROI
Insurance	Commercial brokers (5-20 brokers)	$2M-$10M	HIGH (55%+)	High-value policies, complex renewals, budget available, accessible brokers
Manufacturing/CPG	Food & beverage (50-200 employees)	$10M-$50M	HIGH (60%+)	15.2% revenue loss documented, $245M PepsiCo case, $46.9M predictive maintenance case, $5-7M force-ship fix case, massive urgency

Industry	Segment	Revenue Range	Close Likelihood	Why
Manufacturing/CPG	Personal care/cosmetics (20-100 employees)	$5M-$20M	MEDIUM-HIGH (55%)	SKU proliferation pain, quality control, regulatory, but smaller budgets, niche market
Wholesalers/Distributors	Foodservice distributors (20-100 employees)	$10M-$40M	MEDIUM-HIGH (55%)	High order volume pain, budget available, but less “sexy” than manufacturing
Wholesalers/Distributors	Industrial supply (30-150 employees)	$10M-$50M	MEDIUM (45-50%)	SKU proliferation, quoting pain, but longer sales cycles, more competitive
Real estate	Residential brokerages (20-100 agents)	$5M-$20M	MEDIUM (40-50%)	Lead response and transaction coordination pain clear, but agent independence complicates purchasing, hyper-local
Real estate	Property management (10-50 properties)	$2M-$10M	MEDIUM-HIGH (50-55%)	Maintenance requests, tenant communication, lease renewals — clear operational pain, easier purchasing than brokerage
Marketing agencies	Small digital agencies (5-15 employees)	$500K-$2M	MEDIUM (35-45%)	Pain is real but margins thin, competitive, good for learning not long-term
Marketing agencies	Full-service (15-50 employees)	$2M-$5M	MEDIUM (40-50%)	More budget, more pain, but more complex, competitive

---

MULTIPLE WAYS TWINTHOS/DEWEY HELPS — BY AGENT TYPE

These are the distinct agent capabilities that can be deployed to any of the above industries. Each industry gets a different combination.

Agent Type 1: Inbox/Communication Triage Agent

What it does: Triages incoming communication (email, messages, calls), drafts responses to routine items, flags urgent ones, follows up on unanswered threads, maintains communication logs. **Deploy to:** Every industry. Law firms (client emails, opposing counsel), insurance (client emails, carrier communications), manufacturers (customer orders, supplier emails), wholesalers (order emails, customer inquiries), real estate (lead emails, client messages), marketing agencies (client emails, platform notifications). **Pitch:** "Your inbox is costing you decisions. We deploy an AI employee that handles your communication — triaging, drafting, following up — so you only see what needs your attention."

Agent Type 2: Document/Form Automation Agent

What it does: Fills templates from structured data, generates drafts of standard documents, checks for consistency, routes for human review, learns preferences over time. **Deploy to:** Law firms (engagement letters, pleadings, demand letters, settlement agreements), insurance (renewal proposals, coverage summaries, claim forms, compliance docs), manufacturers (packaging docs, compliance certs, shipping docs), wholesalers (quotes, order confirmations), real estate (transaction documents, listing descriptions, marketing materials), marketing agencies (client reports, campaign briefs, content drafts). **Pitch:** "You have templates you fill out over and over. We deploy an AI employee that generates those documents from your data — first draft, ready for your review — in seconds, not hours."

Agent Type 3: Follow-up/Tracking Agent

What it does: Tracks every open loop — leads, client questions, colleague requests, deadlines, renewals, follow-ups — and follows up persistently until resolved. Maintains the list. Escalates when needed. **Deploy to:** Every industry. Law firms (client follow-ups, deadline tracking, colleague coordination), insurance (policy renewal follow-ups, claim status follow-ups, lead follow-ups), manufacturers (order follow-ups, supplier follow-ups, customer inquiries), wholesalers (order follow-ups, customer inquiries, shipping follow-ups), real estate (lead follow-ups, showing follow-ups, transaction milestone follow-ups), marketing agencies (client deliverable follow-ups, campaign milestone tracking). **Pitch:** "Things fall through the cracks because no one follows up. We deploy an AI employee that tracks every open loop and never misses a follow-up — leads, clients, deadlines, colleagues."

Agent Type 4: Data Entry/Order Processing Agent

What it does: Receives orders, inquiries, requests from multiple channels (email, portal, form, phone), enters them into the system, confirms receipt, flags issues, generates confirmations. **Deploy to:** Manufacturers (PO entry from email/fax/portal), wholesalers (order entry from all channels), real estate (lead capture from Zillow/website/social), insurance (quote requests, application intake), marketing agencies (lead capture, project request intake). **Pitch:** "Orders, inquiries, requests come in through email, portals, forms, phone — and someone has to enter them all. We deploy an AI employee that captures and processes every incoming request 24/7 — no more manual data entry."

Agent Type 5: Reporting/Analytics Agent

What it does: Pulls data from multiple systems, compiles into reports, writes narrative summaries, sends to stakeholders, tracks KPIs, flags anomalies. **Deploy to:** Law firms (time reporting, matter status, financial summaries), insurance (renewal reports, commission summaries, client coverage reports), manufacturers (production reports, quality reports, inventory reports), wholesalers (sales reports, inventory reports, order reports), real estate (market reports, listing performance, transaction status reports), marketing agencies (client reports from multiple platforms — Google Ads, Meta, analytics, SEO). **Pitch:** "You spend hours every week pulling data from different systems and compiling reports. We deploy an AI employee that generates those reports automatically — data, narrative, delivery — on schedule, every time."

Agent Type 6: Scheduling/Calendar Agent

What it does: Manages calendar, schedules meetings, coordinates availability, sends confirmations and reminders, prepares agendas, cancels/reschedules as needed. **Deploy to:** Every industry. Law firms (client consultations, court dates, depositions, meetings), insurance (client appointments, renewal meetings, carrier meetings), manufacturers (production meetings, supplier meetings, customer visits), wholesalers (customer appointments, sales meetings), real estate (showings, inspections, closings, client meetings), marketing agencies (client meetings, campaign launches, content calendar). **Pitch:** "Your calendar is a mess of scheduling back-and-forth, missed confirmations, and forgotten reminders. We deploy an AI employee that manages your calendar end-to-end — scheduling, confirming, reminding, preparing."

Agent Type 7: Lead Qualification/Response Agent

What it does: Captures inbound leads from all sources, qualifies using defined criteria, routes to right person, schedules appointments, sends initial information, follows up persistently. **Deploy to:** Law firms (intake leads from website, phone, referrals), insurance (quote requests, coverage inquiries, referral leads), manufacturers (RFQ responses, customer inquiries), wholesalers (customer inquiries, quote requests), real estate (internet leads from Zillow/Realtor.com/website, referral leads), marketing agencies (agency's own inbound leads, discovery call scheduling). **Pitch:** "Leads go cold in hours. You're losing business because no one responds fast enough. We deploy an AI employee that captures every lead, qualifies it, and responds within minutes — 24/7 — so no opportunity slips through."

Agent Type 8: Inventory/Asset Tracking Agent

What it does: Monitors inventory or asset levels across locations, triggers reorders when thresholds hit, tracks shipments, updates records, generates reports, flags anomalies. **Deploy to:** Manufacturers (raw materials, finished goods, WIP), wholesalers (stock across warehouses/locations), real estate (property availability, listing status), marketing agencies (content calendar, campaign assets). **Pitch:** "You don't know what's in stock until you check. Stockouts cost you sales. Excess inventory costs you carrying costs. We deploy an AI employee that tracks inventory across all locations and triggers reorders automatically — so you never stock out and never over-order."

DEWEY/TWINTHOS SPECIFIC CAPABILITIES

These are the capabilities that make Twinthos/Dewey different from a generic AI automation agency. They come from Nick Vasilescu's architecture and the Orgo/Hermes/Composio stack.

Capability 1: Computer-use agents (not just API integrations)

Most AI automation agencies build API-based automations (Zapier, Make, N8N). These hit a wall when there's no API, incomplete API, or API requires permissions the user doesn't have. **Twinthos/Dewey advantage:** Computer-use agents can do anything a human can do in a UI — click, type, scroll, navigate, extract. "Every reason a personal computer is valuable for a human is also a reason for a personal computer being valuable for AI." **Pitch:** "Other agencies build automations that break when your software doesn't have an API. We deploy AI employees that use your computers the way you do — clicking, typing, navigating — so they work with your existing systems, not against them. No API required."

Capability 2: Each agent gets its own persistent computer

Most agents run on shared infrastructure. When they break, debugging is hard. When they need different environments, it's messy. **Twinthos/Dewey advantage:** Each agent gets its own Orgo computer that persists. Agent shuts down to save cost when idle, but computer remains. Agent returns to same state. "The agent should be shut down of course just to save token cost when the task is complete but the computer itself should remain

running so that the agent could always return to that same computer whenever the script is run again." **Pitch:** "Each of your AI employees gets its own computer — persistent, isolated, always ready. When one breaks, the others keep running. When you need to debug, you remote in. No shared infrastructure, no cascading failures."

Capability 3: Orchestrator + sub-agents architecture

Most agencies build one big automation that tries to do everything. When it breaks, everything breaks. Debugging is a nightmare. **Twinthos/Dewey advantage:** Orchestrator (named "Hubert" in Nick's setup) stays in charge 99% of the time, hands tasks to specialized sub-agents. "One giant bloated agent is a nightmare to debug. This way everything stays clean and purpose-built." **Pitch:** "Other agencies build one automation that tries to do everything — when it breaks, everything breaks. We deploy an orchestrator that manages specialized AI employees — intake agent, document agent, follow-up agent — each purpose-built, each debuggable independently."

Capability 4: Templates — spin up in minutes, not days

Most agencies build each client's automation from scratch. Every engagement is a custom project. Scaling means more people. **Twinthos/Dewey advantage:** Nick makes a template for each agent he builds and gives them away free. "Spin up an AI employee in minutes, not days." The nicks-stack template includes: Telegram QR onboarding, Composio, AgentPhone SMS, Obsidian, gpt-5.5 — bring your own keys, zero secrets baked in. **Pitch:** "Other agencies build every client's automation from scratch — that's why they're expensive and slow. We deploy from templates — your AI employee is running in minutes, not weeks. The template handles onboarding, connectors, knowledge base, interface. We customize for your business, not rebuild from zero."

Capability 5: Demo-first, visual sales

Most agencies sell on presentations, reports, promises. The client has to imagine what it will do. **Twinthos/Dewey advantage:** Computer use is visual. "When you have a sexy demo, you can convert the client." "Computer use is very visual. You can understand what's going on as a client who has no tech experience. It's very cool to watch." Nick sends clips of the agent working to the client as the demo. **Pitch:** "Other agencies show you slides and make promises. We show you the AI employee working — clicking through your systems, processing your orders, handling your clients — recorded and sent to you. You see it work before you buy. The demo converts."

Capability 6: Natural language = the interface

Most agencies require the client to learn tools, workflows, dashboards. The client has to adapt to the automation. **Twinthos/Dewey advantage:** "If you can describe a process in words and understand the sequence and combination of these different elements involved of a workflow, then you can create a computer use agent for it with natural language." "You don't have to write a single line of code." The client talks to the agent in English (or any language). The agent does the work. **Pitch:** "Other agencies make you learn their tools, their dashboards, their workflows. We deploy AI employees you talk to in plain English — describe what you need, and it gets done. No new software to learn. No dashboard to master."

Capability 7: 48-hour delivery

Most agencies take weeks or months to deliver. The client waits. Momentum dies. **Twinthos/Dewey advantage:** "It shouldn't take longer than 48 hours to get up and running with the first agent for your customer." The template + Orgo + Hermes + Composio stack makes this possible. **Pitch:** "Other agencies take weeks to deliver. We deploy your first AI employee in 48 hours. You see value in two days, not two months. The clock starts when you say yes."

Capability 8: Unlimited offering (abundance model)

Most agencies sell scoped projects with limited scope, change orders, usage caps. The client worries about scope creep, extra charges, running out of credits. **Twinthos/Dewey advantage:** “Unlimited agents, unlimited usage, unlimited monitoring, support, security, ongoing changes, etc.” “The point is not that the customer needs infinite agents. They don’t need infinite tokens or infinite computers. Most customers they just need one, maybe two, maybe three.” The abundance model removes friction from the offer. **Pitch:** “Other agencies sell you scoped projects with change orders and usage caps. We offer unlimited — unlimited agents, unlimited usage, unlimited support, unlimited changes. You’re not worrying about scope creep or running out of credits. You’re getting an AI employee that just works.”

PITCH TEMPLATES — READY TO SEND

Law firm pitch (personal injury)

“Hi [Name],

I’m reaching out because I’ve been researching how AI is affecting law firms like yours — and the numbers are striking. 74% of billable tasks in law firms can be automated. 78% of firms your size aren’t using AI yet.

That means you’re either losing ground or about to gain a serious advantage.

Here’s what I’m offering: We deploy AI employees that handle the repetitive work in your practice — intake, document creation, time entry, deadline tracking, client follow-up. Each AI employee gets its own computer, runs 24/7, and you talk to it in plain English.

First agent in 48 hours. $5,000/month. Unlimited everything — usage, support, changes.

No tokens. No infrastructure. No learning new tools. You get a digital employee that knows your practice.

The firms that move now are going to have a serious edge over the 78% that are still sitting this out.

Want to see a 3-minute demo of an AI employee handling intake for a law firm?”

Insurance agency pitch

“Hi [Name],

I’m reaching out because the insurance industry is facing an operational divide — and agencies like yours are right at the center of it.

Here’s what the data shows: 82% of insurers believe AI will dominate the industry’s future. But only 14% have actually integrated AI into their operations. The rest are running on spreadsheets and disconnected systems while transaction volumes rise 29% over the next two years.

That means settlement cycles are lengthening. Reconciliation is getting harder. Audit exposure is growing. And your competitors who move now are going to have a serious edge.

Here’s what I’m offering: We deploy AI employees that handle the repetitive work in your agency — policy renewals, lead response, reconciliation, claims follow-up, compliance documentation. Each AI employee gets its own computer, runs 24/7, and you talk to it in plain English.

First agent in 48 hours. $5,000/month. Unlimited everything.

No tokens. No infrastructure. You don’t have to replace your existing systems — the AI employee works with what you have.

The agencies that move now are going to be the ones on the right side of the operational divide.

Want to see a 3-minute demo of an AI employee handling policy renewals for an insurance agency?”

Manufacturing/CPG pitch

“Hi [Name],

I’m reaching out because the manufacturing industry is facing a margin crisis — and the numbers are hard to ignore.

According to a 2026 survey of 1,453 manufacturing executives, 15.2% of manufacturing revenue is being lost today to delays, downtime, rework, quality deviations, and suboptimal asset use. That’s expected to hit 29% by 2030.

Only 13% of manufacturers have AI embedded end-to-end today. But 37% expect to by 2030. The ones who move now capture the gap.

Here’s what I’m offering: We deploy AI employees that handle the repetitive work in your operation — order processing, inventory tracking, quality documentation, compliance reporting, supplier coordination. Each AI employee gets its own computer, runs 24/7, and works with your existing systems — no API required, it uses your computers the way your team does.

First agent in 48 hours. $5,000/month. Unlimited everything.

The ROI cases are proven: PepsiCo captured $245M in annual EBITDA from inventory optimization alone. A beverage manufacturer captured $46.9M from predictive maintenance. A CPG client recovered $5-7M from fixing order errors.

You don’t have to replace your existing systems. The AI employee works with what you have.

Want to see a 3-minute demo of an AI employee handling order processing for a manufacturer?”

Real estate pitch

“Hi [Name],

I’m reaching out because real estate is facing a bottleneck that’s now reaching boardrooms — insurance delays.

According to industry reporting, rising premiums are throwing coverage out of alignment with lender requirements, triggering week-long negotiations just to get deals across the finish line. One firm reported the delay cost them nearly two weeks of interest carry and jeopardized a hard-won rate lock.

Insurance is no longer just a line item — it’s become a transaction bottleneck. And the rest of your operation — lead response, transaction coordination, listing management — is eating your agents’ time.

Here’s what I’m offering: We deploy AI employees that handle the repetitive work in your brokerage — lead response, transaction coordination, listing distribution, client communication, showing coordination. Each AI employee gets its own computer, runs 24/7, and you talk to it in plain English.

First agent in 48 hours. $5,000/month. Unlimited everything.

The lead response agent alone pays for itself — internet leads go cold in minutes, and an AI employee responds within minutes, 24/7, while your agents are showing properties, negotiating deals, or at dinner.

Want to see a 3-minute demo of an AI employee handling lead response for a real estate brokerage?"

HOW TO USE THIS DOCUMENT

1. **Pick one vertical** to start. Nick's advice: "you don't have to start super niche from the beginning. In fact, you can always niche down after trying a marketing agency, trying a law firm, trying all these different industries, seeing what works well for you, where the market pulls you, and then going super vertical."

2. **Within that vertical, pick a sub-niche.** "Pick a category and then you can do like, you know, real estate agencies in Florida. So that's like, you know, a geography is one way to do it. Or you can pick a specific type of real estate professional."

3. **Build one agent for one use case.** "Starting with a workflow is how I like to start because it's a single use case. Makes things clearer, simpler, less failure points. You get one nailed use case, start there."

4. **Record a demo.** "When you have a sexy demo, you can convert the client." Send it to prospects.

5. **Start with the universal bottlenecks.** Every company has inbox overload, follow-up failure, meeting overload, open loop fatigue. These are the easiest entry points — the pain is universal and the agent solution is the same regardless of industry.

6. **Expand within the vertical.** "After you have that, it's also just a very competent employee that can do other things too adjacent to that task that it's already really good at."

7. **Template everything.** "Make a template for each agent I create and give them all away — spin up an AI employee in minutes, not days."
